ARUL DHAS A

SUPPORT ENGINEER I | APPLICATION SUPPORT & DEVOPS FUNDAMENTALS

8925356370 | dhas12346@gmail.com | Tirunelveli, Tamil Nadu, India
Portfolio: https://das-portfolio.vercel.app/

PROFILE SUMMARY

- Early-career technology professional currently working as Support Engineer I at Icanio Technologies on two client engagements, handling tickets, issue analysis, Root Cause Analysis (RCA), infrastructure monitoring and application troubleshooting, with a foundation in application support, web development, Linux, Git, shell scripting, Docker and cloud fundamentals.
- Practised Git workflows including branching, merging and rebasing, and shell scripting with conditions, loops, functions, arguments, case statements and Bash strict mode.
- Working knowledge of containerization with Docker and Docker Compose, and hands-on exposure to AWS services (EC2, S3, VPC, IAM, RDS) and Azure (completed Udemy and Coursera courses, including creating a virtual machine and deploying a web server).
- Experience setting up and running React, Java, Python and .NET applications locally, with an understanding of application deployment concepts and the SDLC.
- Hands-on with Kubernetes ConfigMaps, Azure Container Registry and Azure infrastructure (VNet, NSG, VMs, Bastion), alongside Helm and Logic Apps fundamentals.
- Quick learner with strong teamwork and problem-solving skills, focused on troubleshooting and continuous learning.

SKILL SETS

Application Support	Ticket handling, issue analysis, Root Cause Analysis (RCA), infrastructure monitoring, application troubleshooting; application deployment concepts, DevOps fundamentals, SDLC, GitHub repository setup, local deployment
Operating Systems	Linux fundamentals and commands
Version Control	Git, GitHub, branching, merging, rebasing, Git workflows
Shell Scripting	Conditions, loops, functions, arguments, case statements, Bash strict mode
Containers & Kubernetes	Docker images and containers, Dockerfiles, volumes, networking, Docker Compose; Kubernetes Pods, Deployments, Services, ConfigMaps; Helm fundamentals
Cloud & Networking	AWS fundamentals: EC2, S3, VPC, IAM, RDS; Azure: Resource Groups, VNet, Subnet, NSG, Virtual Machines (Ubuntu), Azure Bastion, SSH, Azure Container Registry (ACR), Logic Apps; IP addressing, CIDR notation and calculations; AWS budget alerts
Programming & Web	HTML, CSS, JavaScript, React, Python; exposure to Java and .NET application setup/deployment
Tools & Platforms	Visual Studio Code, GitHub, Vercel, Django, MySQL

PROFESSIONAL EXPERIENCE

Icanio Technologies, Tirunelveli – Present
Support Engineer I
Tech Stack: Azure, AWS, Kubernetes, Helm, Docker, Linux, Git, GitHub, Shell Scripting

RESPONSIBILITIES

- Provide application and infrastructure support across two client engagements: raise and track tickets, analyze issues, perform Root Cause Analysis (RCA) and resolve them.
- Monitor infrastructure health and troubleshoot application issues to keep environments stable.
- Set up GitHub repositories and run React, Java, Python and .NET applications locally; apply DevOps fundamentals, application deployment concepts and the SDLC.
- Use Linux commands and shell scripting (conditions, loops, functions, arguments, case statements, Bash strict mode) and follow Git workflows including branching, merging and rebasing.
- Built a working knowledge of Docker (images, containers, Dockerfiles, volumes, networking, Docker Compose) and AWS (EC2, S3, VPC, IAM, RDS, budget alerts).

Engagement 1: Application & Infrastructure Support (approx. 4 months)
Role: Support Engineer I

- Raised support tickets and analyzed application and infrastructure issues reported in the environment.
- Prepared Root Cause Analysis (RCA) for incidents and worked on resolutions to prevent repeat issues.
- Monitored infrastructure and troubleshot application problems to restore normal operation.

Engagement 2: Cloud Infrastructure & Kubernetes Operations (Present)
Role: Support Engineer I
Tech Stack: Azure, Azure Container Registry (ACR), Kubernetes, Helm, Azure Logic Apps, Linux

- Raise tickets, analyze issues and document Root Cause Analysis (RCA) for application and infrastructure problems.
- Monitor infrastructure and troubleshoot application issues across Dev, Dev2 and QA environments.
- Add and update Kubernetes ConfigMap values across Dev, Dev2 and QA, preserving existing configuration, and verify that the changes were applied correctly.
- Pull container images from Azure Container Registry (ACR) and verify their actual image size.
- Analyze Azure service notifications (Azure Functions migration, Standard SSD billing changes, Data Collector API retirement, Azure Backup Soft Delete, GPv1 to GPv2 storage migration) and assess the required actions and impact on project infrastructure.
- Learning and applying Helm charts, Kubernetes Pods, Deployments and Services, and Azure Logic Apps for scheduled start/stop of Virtual Machines.

PROJECTS

Blue Collar Bridge – Connecting Blue Collar Workers with Local Customers
Academic Project | **Tech Stack:** Python, Django, HTML, CSS, Bootstrap, MySQL

- Developed a web application concept connecting local customers with blue-collar workers.

Portfolio Website
Mini Project | **Tech Stack:** React, Bootstrap, HTML, Vercel

- Built and deployed a personal portfolio website: das-portfolio.vercel.app.

CERTIFICATE COURSES

- Microsoft Azure: From Zero to Hero – The Complete Guide – Udemy (21 hours) | May 2026
- Azure: Create a Virtual Machine and Deploy a Web Server – Coursera Project Certificate | Oct 2026
- Python Program – U.ST (Coursera)
- Agile Project Management – HP LIFE online course

EDUCATION

- Master of Computer Applications (MCA) | PET Engineering College | 2024 – 2026
- Bachelor of Computer Applications (BCA) | Muslim Arts College | 2020 – 2023
- Higher Secondary Education | Sivanthi Matriculation Higher Secondary School | 2020
- Secondary Education | Sivanthi Matriculation Higher Secondary School | 2018

SOFT SKILLS & LANGUAGES

- Teamwork • Problem-solving • Critical thinking • Decision-making
- Languages: English, Tamil
